

Chenille Equipment

1 HEAD 6 COLOR 500MM ZSK CHENILLE MACHINE

Machines with integrated "K"-head are designed for demanding chenille and chain embroidery applications. Amazing effects are possible through the combination of both embroidery modes within one pattern. Especially the automatic color change for up to six colors, as well as height adjustment for the chenille loops offer great options for your creativity. The drive including four step motors allows the individual movement of the main operational elements such as needle, presser foot and yarn laying device. For the first time, a speedy and reproducible adjustment of the machine to the different major elements yarn, presser foot and pattern is thereby possible.
