STICK TABS

APPLY POWERTAPE

PUNCH HOLE

CRYSTAL CLEAR POWERTABS®

BAN 014

- Crystal clear tabs let your color image shine through
- Corner friendly shape looks great on banner
- Neck loop option for quick light-duty hanging
- Use center hole for maximum outdoor strength
- Use PowerTabs neck loop for hanging of rigid board

Packaging: 4 tabs/sheet; 25 sheets/pk; 5 pk/case

Tab Size: 2.125"x5.5"

CRYSTAL CLEAR MINI POWERTABS®

BAN013

- Mini tab for indoor or light-duty outdoor
- Crystal clear adhesive sticks permanently and won't yellow
- Lower cost than large tabs
- Great for films such as PVC, polypropylene, & polyethylene

Packaging: 5 tabs/sheet; 20 sheets/pk; 10 pk/case

Tab Size: 1.5" x 3.125"

POWERTABS®, LARGE WHITE

BAN 011

- White tabs are lower in cost than clear, but just as strong
- Super strong and durable for outdoor use
- Use PowerTabs neck loop for "no-grommet" hanging of rigid board
- Great for films such as PVC, polypropylene, & polyethylene

Packaging: 4 tabs/sheet; 25 sheets/pk; 5 pk/case

Tab Size: 1.5" x 2.75"

POWERTABS®, MINI WHITE

BAN 012

- Mini tab for indoor or light-duty outdoor
- Economical choice when lower cost is desired
- PowerTabs are made of recyclable material, made in USA
- Great for films such as PVC, polypropylene, & polyethylene

Packaging: 5 tabs/sheet; 20 sheets/pk; 10 pk/case

Tab Size: 1.5" x 3.125"

CRYSTAL CLEAR BRAVOTABS®

BAN 017

- Large square "one size fits all" tab
- Tab looks great along edges or on corners
- No neck loop - Cleaner banner appearance
- Use with PowerTape or MegaTape for ultimate strength
- Available in convenient Starter Kit for "Banner Ups beginners"

Packaging: 4 tabs/sheet; 25 sheets/pk; 5 pk/case

Tab Size: 1.875" x 3.875"

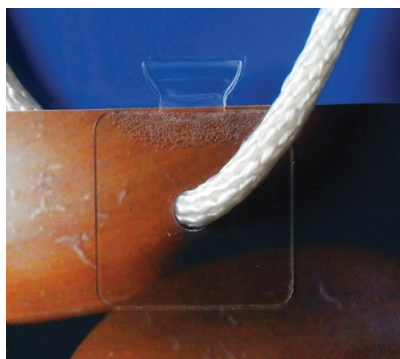

POLYTABS®

BAN 062

- Low cost for high volume users. 2000 tabs/roll, 4 tabs per perf sheet
- Crystal Clear version
- Maximizes strength of lightweight films (PVC, PP, PE, PET)
- So easy customers can do it themselves. Include a sheet with banner!

Packaging: 2000 tabs/roll

Tab Size: 1.5" x 3.125"

EDGETABS™

BAN 016

- Small square tab for use along banner edges or on corners
- Lower cost than larger tabs. Just peel and stick.
- Neck loop option for fast light-duty hanging
- Intended for indoor or light-duty outdoor use

Packaging: 4 tabs/sheet; 25 sheets/pk; 5 pk/case

Tab Size: 1.5" x 4"

- Large 574 ft spool
- 1/10th the weight of conventional keder
- Easy to install and sew

Packaging: 574 ft/ spool

Roll Width: 12 or 14 x 3mm

Banner Ups® by Budnick – Your One-Stop Tape Shop!

Pressure sensitive tapes and adhesives are a staple of the Sign and Graphics Market, but finding the right tape can be a daunting task. Your experienced Budnick team is here to help you find the optimal tape product for your customer's unique application. With a broad inventory of the world's leading manufacturers and over 65 advanced converting machines to custom slit, die cut, print, spool or laser cut, Budnick Converting can give you the right tape, the right configuration and the right cost to win business.

Budnick provides more than just tape. We provide simple tools to help you and your customer determine the product you need. The Banner Ups Tape Guide can be your roadmap for sorting out the confusing world of graphic tapes. By answering just a few simple questions, a color-coded system guides you to the product that is right for you, from these main application categories:

CATEGORY 1 – GRAPHIC OVERLAYS AND LAMINATING

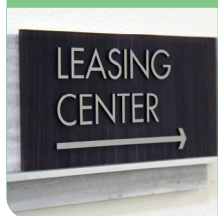

Adhesive Transfer Tapes - These tapes are often referred to as "free films" because they are simply pure adhesive on a liner with no carrier film. When used to laminate paper or film, these allow you to imitate direct coating of adhesive on any surface, even in low volume. In thicker gauges, they can fill uneven surfaces to create high adhesion. The better quality transfer adhesives are clearer. These tapes are often used for graphic overlays, wide web lamination, nameplates, attaching layers, or kits for POP displays.

CATEGORY 2 – BONDING SMOOTH SURFACES

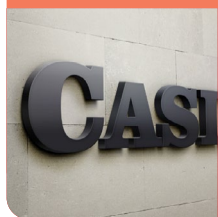

Double-Sided Film Tapes - Film tapes with rubber or high tack acrylic adhesive on both sides create quick, permanent, and low-cost bonds on relatively smooth substrates. Suitable for banner hemming, assembly of smoother flexible or rigid vinyl, polystyrene, plastics, foam board, nameplates, metals, etc., or flush mounting indoor signs and displays. Specialty versions include Hi-Lo tapes with removable adhesive on one side for easy replacement.

CATEGORY 3 – BONDING TEXTURED SURFACES

Double-Sided Foam Tapes - Polyethylene foam tapes with high tack, permanent adhesive on two sides help level out materials and fill gaps on textured surfaces to create a stronger bond. They are typically used to mount ADA, Wayfinding, other indoor signs, or bonding POP displays. Better quality foam tapes are suitable for medium to long-term outdoor use and can be a low-cost alternative to High Bond Tapes. Specialty versions include Hi-Lo foam tapes with removable adhesive on one side for easy replacement.

CATEGORY 4 – HEAVY DUTY BONDING

High Bond Tapes - High bond foam tapes, such as 3M™ VHB™ are the ultimate grade pressure sensitive adhesives. They often replace or are used in conjunction with mechanical fasteners & glues for permanent bond strength in interior and exterior signs. This includes mounting dimensional lettering, making monument signs, and components of electrical signs. Acrylic foam tapes can resist UV rays, handle extreme climates, bond to most sign materials, form moisture seals, dissipate energy, and are quick and easy to use.

TIPS & TRICKS

- When using PowerTabs® and PowerTape® apply tabs first, then tape.
- For maximum strength apply PowerTape® across the entire length of the top and bottom edges of the banner over the top of the PowerTabs®. Running the tape only part way will not achieve full strength.
- For best results, when using PowerTape®, roll finished banner with the print side out in a large diameter roll (3 inches or more).
- To prevent PowerTape® (or any adhesive roll) from sticking together or to tabletops, dust the sides of the rolls with common talcum powder or corn starch.
- When using MegaTape®, apply tape first, next fold banner edge, finally apply tabs.
 - * For alternative method try Hidden Tab Trick (see video QR below)
- DO NOT use MegaTape® to make pole pockets. Instead we recommend PoleTape®.
- When possible clean unprinted banner media surfaces with isopropyl alcohol before applying any adhesive products to maximize bond.

Other associated products:

Masking, Surface Protection, Aisle Marking, Color Coding Tape, Reclosable Fasteners, and Banner Ups by Budnick products

Budnick makes industrial manufacturers more productive when using adhesive tapes, foams, films, papers, foils, and other flexible materials. We utilize nearly 70 years of experience and more than 65 technologically advanced converting machines to custom slit, die-cut, print, spool, laser, and waterjet cut these materials into cost-efficient and labor saving custom parts.
