Introduction to Nazdar Inks

91 Years of Inks & Coatings Innovation

Focused on Your Digital Inkjet, Screen Printing and Flexographic Ink Needs

The Nazdar® company manufactures the most comprehensive selection of UV, water-base and solvent-based screen printing inks, flexographic inks, and wide-format digital inks obtainable from a single source. Nazdar® inks are primarily used by printers in the Point of Purchase (POP), Banner, Container, Industrial, Metal, Nameplate / Membrane Switch, Roll Label, Sign, and Textile decorating markets. Nazdar® digital printing inks can be used in a wide selection of digital inkjet printing presses like VUTEk™, NUR™, Scitex™, Mutoh™, Océ™, Mimaki™ and Gandi™, Hewlett-Packard, Epson®, Roland™, Agfa™, Teckwin™ and other notable wide-format digital printers. Whether printing indoor or outdoor applications on paper, plastics, textiles, metal, glass, or containers and packaging, there's a Nazdar® ink that's right for every job.

Nazdar accepts responsibility as a corporate citizen and acknowledges our obligation to help improve the quality of the environment, society, and community of which we are a part. We are committed to formulate all our products with environmental advantages in mind, including more energy efficient UV curing inks that are V-Pyrol® free and heavy metal free solvent based inks designed to have lower VOCs and easy reclamation. Nazdar also provides extensive regulatory compliance training to industry associations and printers. Nazdar® Shawnee's QMS have received ISO 9001:2008 certification.

www.Nazdar.com

The continuing evolution of communications technology has brought faster access to product information, service and support for on-line users everywhere, including the screen printing industry. Nazdar was one of the first screen printing ink manufacturers to have a presence on the World Wide Web and continues to remain at the forefront of on-line services by offering a wealth of information and educational interactive opportunities to our web site's visitors.

The Nazdar On-Line web site is a screen printer's gateway to the latest news and technical information concerning Nazdar's products and services. It's also the best way to keep up with what's happening locally by visiting the special Nazdar branch location web sites within Nazdar On-Line. That's just the beginning. Nazdar On-Line also provides dates and locations for national and regional trade shows and educational seminars, and links to other important on-line screen printing resources. Nazdar on-Line provides an area where screen printers can download valuable software to assist in color calibration and color matching. Direct e-mail links to Nazdar departments such as customer service, technical service, and regulatory compliance provide fast response to any questions concerning Nazdar products.

If you've visited the Nazdar On-Line site in the past, stop by again; we're continually updating and improving our programming and information. We're sure you'll find it both educational and informative.

UV Screen Inks Reference Chart

UV Flexiform 1500

- Indoor/Outdoor
- Vacuum or Thermal Forming
- 3-Dimensional POP Applications
- Superior Flexibility

PowerPrint® 1600

- Indoor/Outdoor - 2 year
- Multi-Purpose POP Applications
- High Speed, Low UV output
- Hard ink surface, Low Odor
- High Block Resistance

PowerPrint® Plus 1800

- Indoor/Outdoor – 2 year
- Wide Range of Substrates
- Corrugated Plastics
- High Speed, Low UV output
- High Block Resistance

PowerPrint® Banner 1900

- Indoor/Outdoor - 2 year
- Low UV output, Good Flexibility
- High Block Resistance

EC3600 Economy Process Colors

- Indoor/Outdoor Short Term – 6 mos
- Economical Vinyl Banner Ink
- Halftone Availability Only
- Not InterPrintable w/3900 Series

4000 Series

- Indoor/Outdoor – 2 year
- Excellent Acrylic Adhesion
- Heat Bend Applications
- Suitable For Vacuum Forming
- Wide Substrate Range Adhesion

4200 Series

- Indoor and short-term outdoor
- Optimizes cure speed, adhesion range, ink film flexibility, print speed, and image quality

*Pre-test all recommendations prior to full production. Where noted "X" indicates recommended for testing, "S" indicates some materials, "M" indicates recommended for testing with matte flattener, "C" indicates recommended for testing with appropriate catalyst. When catalyzing UV inks, typically 3 - 5% NB80 is used for all applications. Whenever using a catalyst, allow 24 – 48 hours for inks to fully post-cure before checking adhesion.

This product has been tested on this class of material and is recommended for testing under your specific processing conditions.

UV Screen Inks Reference Chart

2400 UV/LED Membrane Overlay

- For second surface printing
- Indoor/Short Term Outdoor

3400 UV Nameplate

- Indoor/Outdoor
- Nameplate / Membrane Overlays
- Compatible w/Acrylic Laminating Adhesives
- 1st & 2nd Surface Printing
- Excellent Opacity & Flexibility

2300 UV/LED Container

- Indoor/Short Term Outdoor
- High Performance Container Ink

N3100

- High Speed Container Printing
- Excellent Adhesion, Scuff, Solvent & Chemical Resistance

VersaCon® 4100

- High Speed Container Printing
- Variety of Plastics
- Excellent Adhesion, Scuff, Solvent & Chemical Resistance

3500 Durable Graphic

- Indoor/Outdoor Fleet Graphics
- Premium Vinyl Film Applications
- Superior Flexibility & Elongation
- Excellent Weatherability & Chemical Resistance Suitable for Thermal Die-Cutting & Premasks

3600 Decal

- Indoor/Outdoor
- High Performance Decal Ink
- Excellent Exterior Durability & Chemical Resistance
- Suitable for Thermal Die-Cut

Nazdar's Conventional and UV-Curable

Screen Ink Simulations for the Pantone® Matching System

Product Information

Nazdar's simulations for the Pantone Matching System® are user-friendly systems that allow Nazdar customers to simulate any of the Pantone® Color Specifier colors with the most popular conventional and ultra violet curable inks.

Nazdar's screen printed color reproductions of the Pantone® Color Formula Guide are simulations of the original offset produced colors. While other screen printing ink manufacturers offer various formula guides for simulating Pantone® colors, Nazdar's method of color reproduction has proven to be more consistently accurate.

Benefits of Nazdar's PMS Formulas

Nazdar formulas are unique for two reasons:

- 1) All formulas were hand-matched under stringent quality control measures to ensure the most accurate simulations possible.
- 2) Higher pigment concentration means more opacity or color density, allowing stronger color possibilities, easier matching and reproduction of the Pantone® shades tailored for the screen printing market.

Higher pigment (greater density) base colors allow easy color adjustment from increasing the color depth to decreasing color value without significantly affecting the color formula.

Because the Nazdar base matching colors contain higher densities, the screen ink simulations for the Pantone Matching System® provide much more versatility in color control. This makes it easier to match colors on a variety of substrates with varying ink deposits caused by mesh, squeegee, print mechanics, etc.

Base Colors

Nazdar's screen ink simulations for the Pantone Matching System® consists of high intensity base component colors including:

- Mixing Clear
- Tinting White
- Tinting Black
- Orange
- Yellow
- Warm Red
- Rubine Red
- Rhodamine Red
- Purple
- Violet
- Reflex Blue
- Process Blue
- Green

Screen Inks Color Matching Recommendations

All color formulas in the Nazdar formula guides use deposit consistencies resulting from controlled print conditions including squeegee, mesh (conventional ink: 260 monofilament, UV ink: 390 plain weave), tension, off contact, print size and other mechanics.

Variables inherent to screen printing often require color adjustment in duplication of the proper color shade or density:

- 1) Color too dark – reduce density by adding Mixing Clear until the proper color is achieved.
- 2) Color too light – reduce the amount of Mixing Clear in the formula until the proper color is achieved.

Since all colors vary significantly in weight, the use of an accurate scale is required for reliable color matching. Scales are available that will weigh in ounces or parts of ounces up to a maximum of one quart range. There are also scales that will measure from ounces to fifty pounds or more.

The use of a knife (spatula) for transferring small amounts of ink from one container to another is much more effective and accurate than pouring or dipping. These knives are available in a variety of sizes, allowing you to mix quantities ranging from a few ounces to five gallons. Wax-free containers ranging from disposable cups to 6-12 ounce plastic containers with lids are recommended for mixing small amounts of color. Power or mechanical mixing is recommended for good reproducible color matching.

Technical Assistance

All color matching formulas included in the Pantone® Color Formula Guide are available in Nazdar's color simulation formula guides for the Pantone Matching System® for conventional and UV inks.

For further assistance, contact Nazdar's technical service department at: 1-866-340-3579.

Nazdar offers fast, accurate custom color matching services. Contact your nearest Nazdar distributor for further information.

Software for Color Formulation and Matching

This symbol designates inks which are part of Nazdar's ColorStar® Color Management System software. ColorStar is a powerful productivity tool developed specifically for screen printing shops, offering a list of features to make your business more efficient – and profitable. The ColorStar package includes Pantone® formula matches for the most popular Nazdar UV and conventional inks and comes complete with software, an easy to follow manual, and a tutorial video program.

- Increases your productivity
- Allows you to produce the correct Pantone® color match time after time.
- Helps reduce set up time and costs with repeat print jobs by allowing you to store the print parameters along with each formula.
- Guarantees the right quantity of ink mixed for each print job by allowing you to perform accurate calculations before you begin.
- Allows you to accurately cost-out a job before giving a quote.
- Compatible with any PC in the Microsoft Windows environment.

All trademarks used herein are property of Pantone, Inc.

Nazdar's color mixing ink formulations produce only simulations of Pantone® Colors in this color reproduction method due to differences in ink film, opacity and pigment selection. The pigment selection used in blending inks may cause metamerism. Pantone, Inc. assumes no responsibility for formula accuracy. All trademarks used herein are either the property of Nazdar, Pantone, Inc. or other companies. Portions® Pantone, Inc., 1963, 1991.

Pantone® is Pantone, Inc's check-standard trademark for color. Portions® Pantone, Inc., 1963, 1991.

Halftone & Color Process Screen Printing

Halftone Printing

Halftone images are commonly printed as single color, two color duotone and full four color process color printing. Process color printing is a method to reproduce full color images through the use of four colors, Cyan, Magenta, Yellow, and Black with halftone dot patterns. All process color images are printed as some form of a halftone.

Halftone Inks

Screen Printing halftone inks are different from the standard screen printing ink colors. There are three characteristics that distinguish halftone inks; color, density, and viscosity. These characteristics will typically apply to each type of ink system: water-based, solvent-based, and UV curing.

Color

Nazdar has been manufacturing halftone inks over the course of several generations of halftone color specifications. Therefore not all Nazdar halftone screen printing inks are made to meet the same printing specifications. Depending upon the market requirements, there will be Nazdar halftone inks that meet ISO 12647-2 specifications for G7 printing, and there are halftone inks that are designed to meet SWOP proofing specifications.

Density

The ability of a transparent ink to absorb specific wavelengths of reflected light is called density and is measured with a densitometer. The measurement of density of a process color ink is considered an excellent way to measure and control actual ink deposit.

Most Nazdar Screen Inks are made in a standard density set that will result in commercial graphic arts density values on the intended substrate for that specific ink series.

Most Nazdar ink series will also have a dense set of halftone inks which are intended to give a printer the flexibility to adjust the density of an ink for various substrates and ink deposit levels.

Viscosity

Halftones are specified by LPI or line per inch of dots. Common LPI counts for screen printing can range from 35 LPI to 150 LPI. This wide variation of halftone LPI count requires a very different performance level from the inks. Generally speaking, the lower LPI counts use a thicker or heavier viscosity ink, while LPI counts above 85 LPI require a less viscous ink that will flow out more and facilitate higher printing speeds.

- Nazdar halftone inks are built in three different viscosity levels:
- HT designated inks are heavy body inks for low LPI counts.
- MTR medium tack rheology inks are for mid LPI counts of 55 – 85 LPI.
- LTR low tack rheology inks are for high LPI counts of 85 LPI and higher.

Estimating Screen Ink Coverage & Costs

Technical information provided for Nazdar Inks always references ink coverage within a range of expected results, such as 2,700 to 3,500 square feet per gallon. This wide range considers all the variables a particular ink series may experience when printed using various applications, mesh, equipment, substrate, and ink viscosity. If your facility prints using three or four different ink/substrate combinations, these coverage figures are too broad for you to accurately determine ink coverage and cost.

To more accurately estimate ink coverage, cost and quantity required for a given job, Nazdar offers the following formula:

1. Weigh the ink in the container after it has been mixed and thinned, just prior to printing. Record this weight.

1 Quart of 1652 Super Opaque Black = 4168.5 grams per gallon

2. Print one sq. ft. (12" x 12" or some division of this) of solid ink coverage onto the substrate most often used for this particular ink. Use the ideal press set-up to achieve the most even ink deposit. The more sheets printed, the more accurate the results. In this example, 122 sheets were printed. Return as much of the ink as possible back into the container and weigh the container. Subtract this weight from the first weight to yield the weight of the ink used to print 122 sheets.

122 square feet coverage of 1652 on gloss Quintessence 80# cover stock used 136 grams of ink 4168.5 grams per gallon ÷ 136 grams ink used = 30.7 x 122 square feet = 3745.4 sq. ft. gallon of 1652 on Gloss Coated Quintessence Paper using 380.34 mesh with a 70/90/70 durometer at 24 n/cm.

Divide the cost of one gallon of this ink by the coverage figure in order to achieve the actual cost per square foot of this particular ink on this particular stock.

\$107.70 per gallon ÷ 3745.4 sq. ft. gallon = .029 or \$.029 per square foot.

3. To put these figures into action, estimate the amount of 1652 ink required and the cost to produce 5,000 posters where the actual print area is 14" x 22" on a 20" x 26" poster. Since the print area is not solid, you may "eyeball" the artwork to guess the approximate coverage of ink as a percentage. This is also common for halftone and process color images.

14" x 22" = 308 square inches x 60% coverage (an estimate) = 185 square inches ink

185 sq. inches ÷ 144 (12" x 12") = 1.28 square feet of ink

1.28 square feet of ink x 5,000 sheets = 6,400 square feet total ink coverage

6,400 square feet ÷ 3745.4 square feet per gallon = 1.71 gallons of 1652

Total ink cost without waste is 1.71 x \$107.70 = \$184.17

Many of these calculations have been included as part of Nazdar's ColorStar® software program, enabling printers to quickly and easily determine costs and coverages on any particular job. See page 57 for more information about the many time - and money - saving benefits of ColorStar.

Nazdar Screen Printing Inks

The following symbols are used throughout this catalog to provide quick visual references for certain important product features:

These symbols represent the type of chemistry used in formulating specific ink products:

= This symbol designates inks which are part of Nazdar's ColorStar® Color Management System software. ColorStar is used to produce accurate PANTONE® color matches, cost-out jobs, store custom ink formulations, and much more. See the ColorStar section on page 4 for more information.

Though we have endeavored to make this Guide as comprehensive as possible, we cannot address every conceivable printing situation a screen printer might encounter. If you have questions concerning issues not covered in this Guide, we encourage you to contact our Technical Service department at 866-340-3579, or e-mail to cstech@nazdar.com.

Nazdar's color mixing ink formulations produce only simulations of PANTONE® Colors in this color reproduction method due to differences in ink film, opacity and pigment selection. The pigment selection used in blending inks may cause metamerism. Pantone, Inc. assumes no responsibility for formula accuracy. All trademarks used herein are either the property of Nazdar, Pantone, Inc., or other companies. Portions® Pantone, Inc., 2003.

Pantone® is Pantone, Inc's check-standard trademark for color. Portions® Pantone, Inc., 2003.

Guidelines for Ink Usage:

Nazdar® stands behind the quality of this product. Nazdar® cannot, however, guarantee the finished results because Nazdar® exercises no control over individual operating conditions and production procedures. While technical information and advice on the use of this product is provided in good faith, the User bears sole responsibility for selecting the appropriate product for their end-use requirements. Users are also responsible for testing to determine that our product will perform as expected during the printed item's entire life-cycle from printing, post-print processing, and shipment to end-use. This product has been specially formulated for screen printing, and it has not been tested for application by any other method. Any liability associated with the use of this product is limited to the value of the product purchased from Nazdar®.

Based on information from our raw material suppliers, these products are formulated to contain less than 0.06% lead. If exact heavy metal content is required, independent lab analysis is recommended.

Point of Purchase Inks

1500 Series UV Flexiform Screen Ink

1500 Series UV Flexiform Screen Ink is designed for three-dimensional vacuum or thermal forming on a wide variety of substrates. 1500 Series exhibits excellent adhesion, as well as superior flexibility for forming applications in point of purchase and specialty markets such as three-dimensional signs, game boards, beverage panels, recreational helmets and specialty displays.

Substrates:

Styrene, Polycarbonate, ABS, Acrylic, PETG, PVC.

End Uses:

Three-dimensional signs, game boards, beverage panels, recreational helmets and specialty items requiring vacuum or thermal formed displays.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Standard Printing Colors

1510 Primrose Yellow
1511 Lemon Yellow
1512 Medium Yellow
1519 Fire Red
1520 Brilliant Orange
1526 Mixing Clear
1527 Overprint Clear
1567 Opaque Reflex Blue
1568 Opaque Process Blue
1575 Super Opaque White
1578 High Intensity White
1579 High Intensity Black

Halftone Colors

PowerPrint® 1600 Series UV Screen Ink

The multi-purpose PowerPrint® 1600 Series UV Screen Ink meets the increased processing speeds of modern printing equipment, curing at lower levels of ultraviolet energy, thereby reducing energy costs and substrate heat exposure. PowerPrint® 1600 Series cures to a tough finish that is highly block resistant. It is engineered to be cost effective for indoor and outdoor retail displays. PowerPrint® 1600 Series includes both gloss and matte colors.

Substrates:

Styrenes, rigid vinyls, pressure sensitive vinyls, polycarbonates, some acrylics, coated papers, coated cardstocks and treated fluted polypropylenes (see Additives section)

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

PowerPrint® Plus 1800 UV Screen Ink

The multi-purpose PowerPrint® Plus 1800 Series UV Screen Ink has been formulated to meet the processing speeds of the most modern printing equipment including in-line presses, for a wide range of substrates including treated corrugated polypropylene. PowerPrint® Plus 1800 features include: fast curing, hard ink surface, and high block resistance.

Substrates:

Styrene, cardstock, coated paper, matte vinyl, rigid vinyl, top coated polyester, pressure sensitive vinyl, treated polyethylene banner, treated polypropylene banner, treated corrugated polypropylene and some high density polyethylene sheeting (not recommended for highly plasticized vinyl materials such as vinyl banner and static cling, and not recommended for container or nameplate applications)

The surface tension for polyethylene and polypropylene substrates should be at or above 44 dynes/cm

End Uses:

Point-of-Purchase applications on a wide range of substrates for indoor and outdoor advertising.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

PowerPrint® Banner 1900 UV Screen Ink

PowerPrint® Banner 1900 UV Screen Ink has been formulated to excel in performance for indoor and outdoor Point of Purchase display and banner printing. PowerPrint® Banner 1900 features: low UV output required for curing, good flexibility, and extremely high block resistance.

Substrates:

Vinyl banner, treated polyethylene banner, most static cling, pressure sensitive vinyl and styrene

The surface tension for polyethylene substrates should be at or above 44 dynes/cm

End Uses:

Indoor and outdoor banner and POP applications.

3900 Series UV Flexible Banner Screen Ink

3900 Series UV Flexible Banner Screen Ink has been formulated specifically for indoor and outdoor vinyl banner applications requiring an ink film flexible enough to accommodate folding, sewing, and grommeting, while being block resistant when banners are stacked ink to ink. This ink will work well for cling vinyl applications that require extreme flexibility and the intercoat adhesion properties necessary for printing double sided window decals. 3900 Series has been designed to adhere to highly plasticized vinyls.

Substrates:

Vinyl banner, static cling vinyl, low tack vinyl and other flexible vinyls

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

NAZDAR
Ink Technologies

4000 Series UV Screen Ink

4000 Series UV Screen Ink is a unique multi-purpose graphic screen printing ink formulated to adhere to a wide range of substrates and provide the flexibility to be suitable for heat-bending, router cutting, and low draw thermoforming for the sign and graphics markets.

Substrates:

PETG, styrene, acrylic, polycarbonate, most rigid and flexible vinyl, static cling vinyl, some anodized metal, rigid and flexible treated polyethylene, rigid and flexible treated polypropylene, and treated fluted polypropylene.

Various Acrylic materials including: Arkema: Plexiglas® G, Plexiglas® MC, Plexiglas® MCS, Plexiglas® SG, Plexiglas® T Evonik Cyro: Acrylite® FF, Acrylite® SG, Acrylite® GP Plaskolite: Optix®, Optix® LD, Duraplex

Note: Acrylic recommendations are based on internal adhesion testing under the processing outlined in this technical data sheet. Nazdar does not have control over the substrate manufacturer's process tolerance, changes to formulation, aging of material, masking material, etc. It is recommended for the user to qualify adhesion and finishing processing prior to full production.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

4200 Series UV Screen Ink

Nazdar's 4200 Series UV Screen Ink incorporates the newest formulation technology to optimize cure speed, adhesion range, ink film flexibility, print speed, and image quality. 4200 Series represents a breakthrough in providing a competitive, high quality ink that withstands some of the toughest finishing and shipping requirements in the graphics market.

Nazdar's 4200 Series UV Screen Ink has been formulated for indoor and short-term outdoor performance on a wide range of substrates including styrene, coated paper and corrugated polypropylene substrates.

Substrates:

Coated paper/board, styrene, treated fluted polypropylene, treated polyester, most rigid and flexible vinyl, static cling vinyl, most rigid and flexible treated polyethylene, most rigid and flexible treated polypropylene

Note: The surface tension for polyethylene and polypropylene substrates should be at or above 44 dynes/cm.

3500 Series UV Durable Graphic Screen Ink

3500 Series UV Screen Ink has been formulated for use on premium pressure sensitive vinyl films intended for exterior applications. It exhibits superior flexibility and elongation, allowing for stretching the printed vinyl film over rivets for fleet graphic applications. The 3500 Series has excellent weatherability and chemical resistance, and may be used on decals that will be thermal diecut and pre-masked.

Substrates:

Premium pressure sensitive vinyls.

End Uses:

Highly flexible and durable pressure sensitive decals for Fleet and Original Equipment Manufacture (OEM).

NAZDAR
Ink Technologies

GV Series Gloss Vinyl Screen Ink

GV Series Screen Ink has been formulated for printing on vinyl surfaces where a high gloss finish is required. These inks form a positive bond with most vinyl surfaces and will dry to an extremely flexible film which may be vacuum formed. The pigments used in these inks have been carefully selected for fade resistance under outdoor exposure.

Substrates:

Vinyls, polycarbonate, acrylic.

End Uses:

Nameplates, identification panels, vacuum formable with good exterior performance.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

VF Series Flat Vinyl Screen Ink

VF Series inks are formulated to have excellent adhesion to both rigid and flexible vinyl's and some vinyl coated materials. The inks have excellent printability, opacity, fast drying and non - blocking characteristics. VF is recommended only for interior applications

All colors except VF111 Black may be heat sealed. VF121 Non Arcing Black is used for heat sealing.

Substrates:

Flexible vinyl and some vinyl coated materials.

End Uses:

Binders, shower curtains, vinyl banners and static cling vinyl.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Standard Printing Colors

NAZDAR
Ink Technologies

S2 Series Systems-2 Gloss Vinyl Screen Ink

System-2 Series ink is a high gloss, solvent-based screen ink formulated for optimum performance on pressure-sensitive vinyls and top coated polyesters used for decal applications.

Substrates:

Pressure-sensitive vinyl and print-treated polyester.

End Uses:

Pressure-sensitive decals recommended for exterior exposure.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

9600 Series Polyester Screen Ink

9600 Series Screen Ink is designed primarily for printing on untreated polyester films. The ink will dry to a film exhibiting good gloss and flexibility with the exception of 9652 Super Opaque Black, which exhibits a matte, but flexible ink film.

9600 Series may be catalyzed with NB72 Catalyst or NB80 Adhesion Promoter for adhesion to a diverse range of substrates including polyester, some rubber, polycarbonate, melamine plastics, leather and some coated and uncoated metals.

When printing 9600 Series on polycarbonate for insert-mold decorating applications, up to 5% by weight addition of NB72 will provide optimum performance.

Substrates:

Untreated polyester, polyester coated surfaces, some treated or top coated polyester films and polycarbonate.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Standard Printing Colors

96LF10 Primrose Yellow

8900 Series SuperSet Thermo-Set Screen Ink

8900 Series SuperSet Thermo-Set Screen Ink is a high solids, high gloss solvent-based screen ink. A single component, cross linked product, 8900 Series is formulated for printing on pre-coated metal surfaces. Properly cured, 8900 Series exhibits excellent resistance to many solvents, chemicals, humidity and abrasion. 8900 Series is designed to provide maximum flexibility and intercoat adhesion.

Substrates:

Pre-coated metal substrates; coatings include enamel, polyester, acrylic, vinyl and epoxy.

End Uses:

Exterior signage, nameplates and POP display advertising.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Container Screen Printing Inks

Z

2300 Series UV/UV-LED Screen Ink

The 2300 Series UV / UV-LED Screen Ink has been formulated to cure with UV-LED with peak wavelength emission of 395 nanometers and more traditional UV mercury vapor curing system. The ink is designed for printing on various glass and plastic bottles used in the packaging of cosmetics, household chemicals and other similar applications. The ink has been formulated to meet the processing requirements of the container printing industry, such as adhesion to commonly used plastics, opacity, resistance to commonly used chemicals, and speed of cure.

Primary Substrates:

Glass, Treated high density polyethylene (HDPE) and Polyethylene terephthalate (PET)

Additional Substrates

Treated low density polyethylene (LDPE), Treated polypropylene (PP)

The surface tension should be at or above 44 dynes/cm.

Substrate recommendations are based on commonly available materials intended for the ink's specific market when the inks are processed according to this technical data. While technical information and advice on the use of this product is provided in good faith, the User bears sole responsibility for selecting the appropriate product for their end-use requirements. Reference the 'Quality Statement' at the end of this document.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

N3100 Series UV Polyethylene Container Screen Ink

N3100 Series is a UV curable screen ink designed for high speed printing of treated polyethylene bottles. Properly cured, these inks will exhibit excellent adhesion, as well as superior resistance to solvents, chemicals and other products typically packaged in polyethylene and polypropylene containers.

Substrates:

Treated polyethylene and polypropylene containers.

End Uses:

Cosmetic, hair products, chemical, and specialty product container packaging.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Versacon® 4100 Series Versatile Container UV Screen Ink

Versacon® 4100 Screen Ink is specifically designed for high speed printing of a variety of plastic containers. Properly cured, these inks exhibit excellent adhesion and scuff resistance.

Due to the variety of products and chemicals which are packaged in containers printed with the 4100 inks, testing for end use application is strongly advised.

Versacon® 4100 Series screen printing ink exhibits a high gloss finish in all colors.

Substrates:

Treated polyethylene (HDPE, LDPE), polyethylene terephthalate (PET), polycarbonate (PC), treated polypropylene (PP)

End Uses:

Containers for cosmetics, hair products, chemicals and specialty products.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

NAZDAR
Ink Technologies

Versacon® Classic 5100 Series Container Screen Ink

Versacon® Classic 5100 Series Screen Ink is a solvent-based ink system for container printing and exhibits adhesion to various plastics, glass and some metals. The 5100 Series exhibits excellent resistance to a wide range of solvents and chemicals used in cosmetics, personal care and household cleaning applications. As a high gloss, fast drying, single part system, the 5100 Series exhibits good adhesion immediately upon drying, while final properties will be achieved in 5-7 days.

Substrates:

Treated polyethylene and polypropylene, glass and some metals

Note: Due to variations in the type and manufacture of plastics, glass and metals, pre-testing must be done prior to any production run. Adhesion to the substrate does not guarantee satisfactory results with other end-use specifications.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

PA Series Poly-All Screen Ink

PA Series Poly-All Screen Ink has been designed specifically for screen printing on untreated polypropylene. Its unique formulation makes pretreatment such as flaming or surface coating unnecessary. Poly-All will perform satisfactorily on most polypropylene surface. However, since there is considerable variation in the formulation of substrate materials, the user must always pretest the specific substrate for adhesion and product resistance prior to a production run. PA Series inks exhibit a semi-gloss finish. When thoroughly dried, PA Series ink has very good flexibility and durability. Poly-All has proven successful in some pad printing applications.

Substrates:

Untreated polypropylene.

End Uses:

Containers, mugs, cups, specialty ad products.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Standard Printing Colors

Nameplate Screen Printing Inks

NamePlate Inks

2400 Series UV-LED Screen Ink

The 2400 Series UV-LED Screen Ink has been formulated to cure with a LED curing system with wavelength emission of 395 nanometers and minimum wattage output of 4 watts. The ink is designed for second surface printing on polycarbonate and polyester used as membrane overlays where the lamination of pressure sensitive adhesive directly to the ink film may be necessary. The ink has been formulated to meet the processing requirements of membrane overlay applications such as compatibility with most acrylic adhesives, flexibility for embossing, opacity, ink to ink adhesion and speed of cure.

Substrates:

Polycarbonate and some top coated polyester
(UV ink receptive primer)

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

3400 Series UV Nameplate Screen Ink

The 3400 Series Nameplate UV Screen Ink has been formulated to meet the processing requirements of the membrane overlay market; including compatibility with most standard transfer adhesives, flexibility, opacity, ink to ink adhesion, and speed of cure. The 3400 Series is designed for second surface printing on polycarbonate and polyester used as membrane overlays where the lamination of pressure sensitive adhesive directly to the ink film may be necessary.

The 3400 Series with the addition of 5% by weight NB80 UV Adhesion Promoter may also be printed over HP Indigo® digital offset prints.

Substrates:

Polycarbonate, some top coated polyester (UV ink receptive primer).

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

NSC UV Crystal Clear Transparent Inks

NSC UV Crystal Clear Transparent Screen Ink has been formulated to print on polycarbonate and some pre-treated polyester substrates commonly used as membrane overlays. These inks exhibit excellent clarity with very little haze, making them ideal for use as transparent window colors.

NSC UV Crystal Clear Transparent inks may be printed top or sub surface.

Substrates:

Polycarbonate and some pre-treated polyester (UV ink receptive primer).

End Uses:

For first or second surface transparent windows on polycarbonate and some pretreated polyesters used as a membrane overlay.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Standard Printing Colors

NSC29	UV Crystal Mixing Clear
NSC30	UV Crystal Clear Yellow (GS)
NSC31	UV Crystal Clear Yellow (RS)
NSC32	UV Crystal Clear Red (BS)
NSC33	UV Crystal Clear Red (YS)

NSC40 UV Air Texture Clear Fine Screen Ink

The NSC40 UV Air Texture Clear Fine Screen Ink is specifically designed to give a decorative texture effect on first surface polycarbonate used for membrane overlay applications. Texture may vary from fine to very fine depending on the screen mesh. Gloss may also vary depending on screen mesh and substrate.

Substrates:

Polycarbonate and some pre-treated polyester.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

NSC47, NSC48, NSC49, NSC50 UV Air Texture Screen Ink

UV Air Texture Screen Inks are designed to give a clear decorative texture effect on first surface polycarbonate and some pre-treated polyester, used for membrane overlay applications. Textures are available from very fine to very coarse (See Packaging).

NSC47, NSC48, NSC49 and NSC50 UV Air Texture screen inks may be inter-mixed with each other to achieve a desired texture. Mesh counts must be selected for the coarsest texture used in the mixture.

An inert (nitrogen) atmosphere curing unit is not necessary for all Nazdar texture clears designated as "UV Air Texture."

Substrates:

Polycarbonate and some pre-treated polyester

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Stock#	Description	Mesh Count
NSC47	UV Air Tex Very Fine	200 - 355 tpi (80 - 140 tpcm)

PSPC Series Nitrogen Texture Overprint Clear UV Screen Inks

PSPC Nitrogen Texture Overprint Clear UV Screen Inks have been specifically formulated for top or first surface printing on polycarbonate and some top coated or print treated polyester used in membrane overlay applications. These inks are not recommended for hard coated polycarbonate and polyester surfaces.

These inks will produce a variety of textures when cured in an inert atmosphere using a germicidal lamp. The appearance of the texture will depend on ink deposit, nitrogen flow and belt speed. Some of the inks may be mixed together to achieve different textures. Please refer to the chart on the last page to determine ink compatibility.

Properly cured, these inks will exhibit excellent adhesion as well as solvent, moisture and mar resistance.

Substrates:

Polycarbonate and some pre-treated or primed polyesters

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

8800 Series Color-Vue Membrane Screen Ink

Color Vue 8800 Series Screen Inks have been formulated specifically for automotive, membrane overlay and appliance decorating applications, where strong transparent colors with lens-like clarity and high opacity colors are required. The 8800 Series is compatible with most acrylic transfer adhesives.

Substrates:

Polycarbonate and some print-treated polyester.

End Uses:

Backlit panels, nomenclature and instruction panels, membrane overlays.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Industrial Inks

ADE Series Epoxy Screen Ink

ADE Epoxy Screen Ink has been formulated with high quality epoxy resins for excellent adhesion to metals, glass and a wide range of hard-to-print substrates. ADE Series is ideal for electronic and industrial applications and provides outstanding solvent, chemical and abrasion resistance.

ADE is a two-part ink and must be initiated with a catalyst prior to use. ADE ink exhibits a high gloss finish.

ADE Series is for indoor applications only.

Substrates:

Epoxy, melamine, treated polyethylene, treated polypropylene, metals, glass, PC boards.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

8400 Series CVIM Conventional Insert Mold Decorating Screen Ink

8400 Series CVIM Screen Ink has been formulated to meet requirements of the insert mold decorating (IMD) process. 8400 has flexibility for forming and post-form trimming, resistance to wash out during the molding process and adhesion to polycarbonate injection mold resin. Overprinting the 8400 with the 8449 Tie-Coat conventional screen ink promotes adhesion to other injection resins such as ABS, PMMA and PVC.

8400 Series ink is for second surface printing on polycarbonate, polycarbonate blend, or pre-treated polyester films which will be formed then molded in the insert mold decorating process.

The addition of NB72 Catalyst or NB80 Adhesion Promoter is necessary for in-mold decorating applications.

Substrates:

Polycarbonate, polycarbonate blends and primed/pre-treated polyester used for insert mold decoration.

End Uses:

For second surface printing on polycarbonate or polycarbonate/polyester blend films that will be formed then molded in the insert mold decorating (IMD) process.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

NAZDAR
Ink Technologies

182034PC Etch Resist Black Screen Ink

182034PC Etch Resist Black Screen Ink has been formulated to print on various metal stocks, including brass and stainless steel used in the nameplate and printed circuit board industries.

This resist withstands not only most plating solutions but can be used as a solvent strippable resist with alkaline etchants. This resist ink is easily removed with Xylene (2555 Screen Wash) even after baking at relatively high temperature.

Substrates:

Copper, aluminum, brass, stainless steel

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Textile Screen Printing Inks

PX Series Perma-Flex Flock Adhesive Screen Ink

PX Series is formulated as a pigmented adhesive for flocking applications on a wide variety of natural textile materials. The excellent opacity and "short" body allows ease in achieving a thick adhesive deposit for flocking. PX Series is ideal for use without a high temperature dryer.

Substrates:

Cotton, cotton/polyester blends, some synthetics, Sunbrella®

End Uses:

Awnings, beach bags, t-shirts, banners, outerwear.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

DA Series Nylon and Flock Screen Ink

NAZDAR
Ink Technologies

DA Series is a two-part polymerizing screen ink that has been formulated to be extremely flexible and resistant to laundering and dry cleaning as well as ironing. DA Series is highly opaque, extremely flexible and elastic ink for printing and flocking most synthetic and natural textiles, including waterproof nylon and other synthetics having a finish. (Pretesting of waterproof nylon is recommended.)

The DA Series ink must be catalyzed with DA176 Catalyst before using.

Substrates:

Cotton, cotton blends, synthetics, waterproof nylon and finished synthetics.

End Uses:

Nylon jackets.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

8500 Series AquaPrint™ II Super Concentrate Ink

AquaPrint II 8500 Series is a completely aqueous screen ink, formulated with lead-free and heavy metal-free ingredients. 8500 Series offers the brightest and deepest colors available for a wide range of textile substrates. These pigmented concentrates must be extended with AQ51 Prepared Extender Base prior to use.

Note: PANTONE® Matching System Available.

Substrates:

Cotton, cotton/polyester blends, cotton/rayon blends, acetate, some 100% polyester and Lycra blends.

End Uses:

High fashion wearables, light-colored T-shirts, sweatshirts, and towels.

Product Range:

NAZDAR
Ink Technologies

9500 Series AquaPrint™ II Ready-For-Use (RFU) Screen Ink

AquaPrint II 9500 Series is a water-dispersible, lead/heavy metal-free pigmented screen printing ink. 9500 Series is designed to be press ready and can be further extended, for pastel shades, with the use of AQ51 Prepared Extender Base.

Substrates:

Cotton, cotton/polyester blends, cotton/rayon blends, acetate, some 100% polyester and Lycra blends.

End Uses:

High fashion wearables, light-colored T-shirts, sweatshirts, and towels.

Product Range:

Nazdar manufactures the colors listed below in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Standard Printing Colors

9512 RFU Blue 2G
9514 RFU Red YR
9516 RFU Violet 4B
9517 RFU Scarlet LF
9518 RFU Scarlet YDC
9519 RFU Orange R
9520 RFU Blue R
9525 RFU White BR
9526 RFU Fuchsia
9536 RFU Yellow 3RH
9540 RFU Meta-Glo Super KS
9541 RFU Aquatique White
9542 RFU Yellow 2G
9543 RFU Navy
9544 RFU Blue 3G
9546 RFU Black L
9547 RFU Brown SR
9551 RFU Red 2B*
9565 RFU A1351 Aquapaque White
9567 RFU Halftone Blue
9568 RFU Halftone Yellow
9569 RFU Halftone Magenta
9571 RFU Mica Metallic Silver
9572 RFU Mica Metallic Gold
9573 RFU Mica Metallic Copper
9590 RFU FL Magenta
9591 RFU FL Yellow Orange
9592 RFU FL Green
9594 RFU FL Lemon Yellow
9595 RFU FL Red
9596 RFU FL Gold Yellow
9597 RFU FL Cerise
9598 RFU FL Violet

Aqua Series AquaPrint™ II Additives

AQ51 Prepared Extender Base

To be used with 8500 Super Pigment Concentrate to 95% maximum ratio of 5% pigment concentrate to 95% AQ51. Another major use is extending the vibrant 9500 RFU colors to achieve lighter pastel shades.

Availability:

Quart and gallon containers.

AQ52 Low Crock

A binder that when mixed with water and our clear concentrate produces the extender base AQ51. Levels up to 5% can be added to our 9500 “ready for use” inks in instances when additional binders may be needed, such as with greater than normal pigment content.

Availability:

Quart and gallon containers.

AQ53 Thickener

A liquid that will increase the viscosity of prepared colors. Add at 0.5% increments to desired thickness.

Availability:

Quart and gallon containers.

AQ54 Aqualube

A retardant gel that slows down the evaporation rate of water, hence, prevents drying in the screen. Add at levels of 5-10% without fear of limiting pot life or jelling of the ink.

Availability:

Quart and gallon containers.

AQ55 Softener

A product that will impart a silky, soft feel to the print. Add at a level of 2-5% when printing terry towels.

Availability:

Gallon containers.

AQ56 Penetrant

A product that simply aids penetration. Add to prepared inks at a level of 2-5%. It works extremely well on “difficult to print” cloth, such as looped and sheared terry cloth towels.

Availability:

Quart and gallon containers.

AQ57 Antiwick

Used to prevent wicking on certain fabrics which may have surface treatments. Add at 0.5% increments up to a total maximum of 2%

Availability:

Gallon containers.

AQ58 Aquacat

This aziridine-free room temperature catalyst, when used at a level of 3-5%, enables air-dried prints to achieve necessary fastness levels. The curing process will only start to take place once the prints are actually dry. To speed up operations, print may be conveyor-dried at approximately 250° F.

The use of this product is ideally suited for print shops that may not have ovens with sufficient air flow in their heating chamber, or for those shops, who by increasing their belt speed, seek to increase production. Energy costs can be significantly reduced when using this product. The ink/catalyst mixture has a normal shelf life of 8 hours. Do not use the mixture after that period.

Availability:

Quart containers.

8550 Clear Concentrate

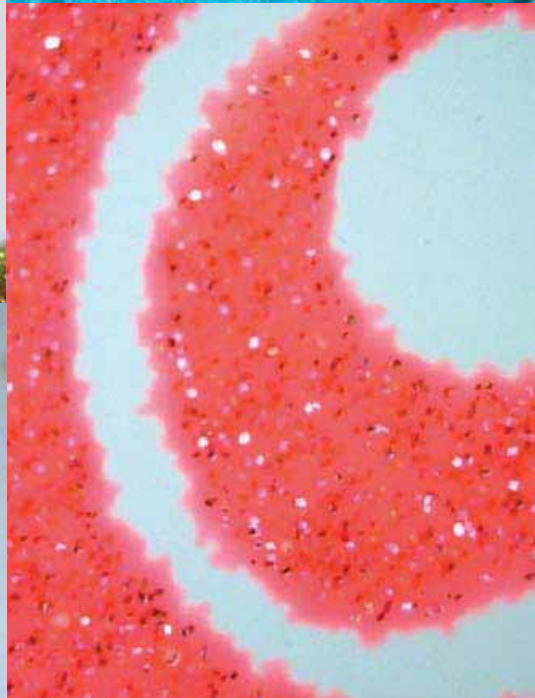

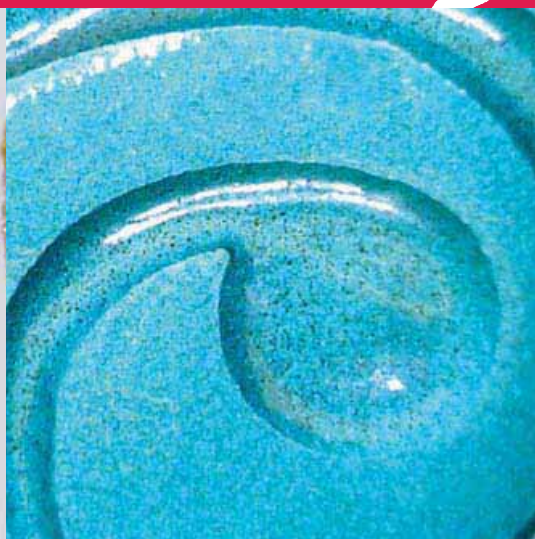

A basic clear concentrate for mixing with water and AQ52 low crock to provide the finished AQ51. As such, this mixture is used to regulate the viscosity of the system. High speed mixing equipment is required to use this product.

Availability:

Quart and gallon containers.

Specialty Inks

2 Part Urethane Clear

Nazdar Urethane Clear is a 2-part overprint clear designed for printing over Nazdar inks, including Plastic Plus, 9700, System 2, and 9600.

Products and Codes

223900 Urethane Clear Part A (gallon only)
223790 Urethane Clear Part B (quarts only)
223750 Urethane Clear Thinner (quarts only)
223760 Urethane Clear Retarder (quarts only)

Advantages of Urethane Clear Include:

1. Excellent outdoor durability
2. Good chemical resistance (excluding MEK)
3. Good flexibility
4. Good adhesion properties to common substrates including cast and 4 mil. vinyls, top coated polyester, and polycarbonate.
5. High gloss, wet look finish

Urethane clear is packaged in 2 parts. Combine parts A and B shown below. Mixing ratios are important to achieve final ink properties

By Weight:

Part A 85% + Part B 15% = 100%

By Volume:

Part A 128 fl. oz. (1 Gallon) + Part B 20 fl. oz. = 148 fl. oz.

Color Card- Specialty Effects Color Card: CARDSPL

Note: For a complete description of this ink series printing applications and parameters, please refer to the Technical Data Sheet available online at: www.nazdar.com. Refer to page 14 of this catalog for Nazdar's Ink Usage Guidelines and heavy metals statement.

NFX20's Graphic Transparent UV Inks

NFX20's Graphic Transparent UV Screen inks provide a high color, high transparency for overprinting metallic effects or on clear substrates for POP / graphic applications. NFX20's Graphic Transparent UV Screen inks can be intermixed to expand your color offering.

Substrates:

Styrene, rigid vinyl, pressure sensitive vinyl, polycarbonates, some acrylics, coated papers, and coated cardstocks

Interprinting Inks:

NFX20's Graphic Transparent UV Screen inks are intended to overprint metallic effects on the substrates outlined in the 'Substrate' section. NFX20's Graphic Transparent UV Screen inks can overprint metallic effect using the following UV ink series:

UV First Down Chrome Silver and UV First Down Chrome Gold
PowerPrint® 1600 UV Ink Series
PowerPrint® Plus1800 UV Ink Series
PowerPrint® Banner1900 UV Ink Series

Refer Technical Data Sheet for the over-print ink to determine its processing recommendations.

Note: when overprinting metallic effects, pre-test to determine suitable inter-printing adhesion. Some metallic effects may and significantly reduce adhesion performance.

Packaging

All items listed below are available in gallon containers. These items are non-inventoried and made to order. See distributor for availability and container sizes of Additives/Reducers and cleaners.

NFX30's High Sparkle Glitter UV Inks

Nazdar's NFX30's High Sparkle Glitter UV screen inks provide ready pre-mixed colors for graphic applications. The ultra transparency of the inks results in a saturated, vibrant color that does not dull the high sparkle, glitter effect.

Substrates:

Styrene, rigid vinyl, some pressure sensitive vinyl, polycarbonate, some acrylic, coated paper, and coated cardstock.

Interprinting Inks:

It is recommended to use NFX30's High Sparkle Glitter inks as only an overprint on the substrates outlined in the 'Substrate' section. NFX30's High Sparkle Glitter inks can be interprinted with:

PowerPrint® 1600 UV Ink Series
PowerPrint® Plus1800 UV Ink Series
PowerPrint® Banner1900 UV Ink Series
4000 UV Ink Series

Refer the inter-print ink's Technical Data Sheet for processing recommendations.

Note: These colors are intended to work well from the container. Due to the large glitter flakes, bumps in the surface should be expected.

NFX56 Magnetic Receptive UV Ink

NAZDAR
Ink Technologies

Magnetic Receptive UV Screen Ink can be used on various substrates to produce a surface coating that will attract a magnet. The ink deposit, printed surface area, and thickness of the magnet contribute to the level of attraction. Magnetic Receptive UV Screen Ink is only suitable for flat substrates; folding, flexing, etc. may cause cracking in the ink layer. The ink itself is non-magnetic.

Substrates:

Rigid Styrene, Polycarbonate, Some Coated Card Stock.

Packaging

The Magnetic Receptive UV Screen Ink is available in gallon containers.

Color Card

Magnetic Receptive Print Sample: LIT0401

Note: For a complete description of this ink series printing applications and parameters, please refer to the Technical Data Sheet available online at: www.nazdar.com. Refer to page 14 of this catalog for Nazdar's Ink Usage Guidelines and heavy metals statement.

NFX135 UV 1st Down Chrome UV Screen Ink

NFX135 UV 1st Down Chrome Silver UV screen ink is used to produce a high sheen metallic effect for graphic applications. This ink is intended to be printed directly onto the substrate, and then overprinted with transparent colors to provide a variety of special color effects.

Substrates:

Coated paper, most styrene, pressure sensitive vinyl, and rigid vinyl

Product Range:

Nazdar manufactures this ink in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

664645PS Hi Gloss Anti-Graffiti UV Screen Clear

664645PS Hi Gloss Anti-Graffiti Clear UV Screen Ink is designed to be used as an overprint clear to allow graffiti to be removed from the surface and to protect the underlying graphics from cleaners. This product is resistant to cleaners and solvents to allow for easy removal of graffiti. 664645PS Anti-Graffiti Clear is designed to be compatible over several inks; test for adhesion and printability over inks before use. Properly cured, this clear will be resistant to most common cleaning fluids; test for resistance properties prior to full scale production.

Substrates:

Pressure sensitive vinyl, coated papers, polycarbonate, static cling vinyl

Interprintable Graphic Inks

The following ink series can be used with 664645PS Anti-Graffiti Clear on their appropriate substrates referenced above: PowerPrint® 1600 UV Ink Series, PowerPrint® Banner 1900 UV Ink Series, 3200 UV Ink Series, 3600 UV Ink Series and 3900 UV Ink Series. Shop conditions vary; pretest the graphic ink and 664645PS Anti-Graffiti combination to determine optimum performance characteristics for a particular set of substrate, screen, press, and curing conditions.

Packaging

664645PS Anti-Graffiti Clear is available in gallon containers. See distributor for availability and container sizes of Reducers and removers.

667702KI Special Mirror Silver Screen Ink

667702KI Special Mirror Silver Screen Ink is a solvent-based ink for printing second surface on transparent polycarbonate film. The ink film exhibits a mirror-like reflective surface when viewed through the top or first surface of the polycarbonate film.

Adhesion of the ink to substrates other than polycarbonate must be tested prior to any production run. The Mirror Silver Ink is not compatible with laminating adhesives. See section on Overprint.

The thoroughly dried ink film may be overprinted with 9700 Series solvent or 1500 Series UV inks for further protection. Overprinting the mirror ink with other ink systems is not recommended.

Substrates:

Polycarbonate

Packaging

Nazdar manufactures this ink in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

60009765KI Special Mirror Silver Screen Ink

6009765KI Special Mirror Silver Screen Ink is a solvent-based ink for printing second surface on transparent polycarbonate and pre-treated polyester film. The ink film exhibits a mirror-like reflective surface when viewed through the top or first surface of the transparent film. The 60009765KI is not compatible with laminating adhesives. See section on Overprint.

Printing the ink over other ink systems is not recommended. The thoroughly dried ink film may be overprinted with a clear, black or white ink for enhanced protection but not necessary for the mirror effect. Compatible Nazdar inks for overprinting are the 9700 Series Conventional All-Purpose Ink, the 3400 Series UV Nameplate Ink and 1500 UV Flexiform Ink.

Substrates:

Polycarbonate, pre-treated polyester

Packaging

Nazdar manufactures this ink in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

SCF Scratch-Off Solvent Inks

SCF Scratch Off inks are specially formulated to be printed on lottery tickets and games that are typically given away by retail outlets. This ink forms a very opaque film that hides the "prize" until the ink is removed by scratching with a fingernail or coin.

The card stock must be coated with a UV curable screen print clear such as the PSLC 294 UV Litho Clear to seal the cardstock prior to the application of SCF Scratch Off inks. An under-print of a clear provides the best adhesion and scratch-off properties of the SCF Scratch Off inks.

Substrates:

Card Stock

Packaging

Nazdar manufactures this ink in gallon containers. See distributor for availability and container sizes of Additives/Reducers and cleaners.

Screen Printing Color Matching & Formulation Software

ColorStar®
color management system

Color Matching and Formulation Software

Nazdar ColorStar® Color Management Systems

Color Management Systems Software for Windows® ColorStar is a powerful productivity tool developed specifically for screen printing shops, offering a list of features to make any screen printing business more efficient – and profitable. The ColorStar package includes Pantone® formula matches for the most popular Nazdar UV and conventional inks and comes complete with software, an easy to follow manual and a tutorial video program.

Compatible with any PC in the Microsoft Windows environment, ColorStar® is available in 3 versions to meet your production requirements and fit your budget.

ColorStar® Online

Nazdar's Online Pantone® Simulation Formula Guide Color Matching System. ColorStar Online provides a fast and easy way for Nazdar ink customers to achieve highly precise Pantone color matches, calculate ink usage for a particular job, or work off existing ink inventory.

Just visit www.nazdar.com/colorstar. Select a ColorStar procedure:

- Ink Formulas
- Find the percentages of inks and chemicals necessary to create a precise color match
- ColorStar calculator
- ColorStar can quickly calculate formulations by unit, by number of prints, or by print area
- Workoff conversion
- Calculate the most efficient way to create a color match using your existing inventory of Nazdar inks

ColorStar® Pro 2.0

- Enhanced calculation field provides very accurate quantity usage predictions using exact parameters based on specific mesh and/or coverage data
- Accurate quantity predictions using exact parameters based on specific mesh and/or coverage data
- Stores the print parameters for each formula reducing costly set-up time for repeat jobs
- Expanded capabilities with updated ink lines including all Nazdar UV ink series
- Selected UV ink lines with 360 Series Inks and the Pantone® formulas
- Allows you to accurately and consistently produce and reproduce the correct Pantone® color match
- Creates database of custom colors - no need to re-enter formulas

Item No. SF0002

ColorStar® Manager

All of the features of ColorStar 2.0 plus:

- Inventory control field - adjusts and tracks inventory
- Generates inventory status reports
- Records re-order information and initiates purchase orders
- Inventory "work-off" function tracks unused ink that can be mixed to produce new colors so you can turn overstock into profit.
- Calculates inventory costs updates for more accurate job costing
- Production Management Reporting function provides cross-reference data on press downtime, formulations, specific ingredients and operator output.
- Open architecture allows entry of any ink series or importation of custom formulated databases.

Item No. SF0003

ColorStar® CheckWeigh

Same software as ColorStar Manager. plus:

- Complete color management system includes ColorStar Manager, desktop PC system, black & white laser printer and Mettler Toledo 50 lb. scale
- Ability to interface with lab scale for smaller batch and sample mixing
- Compatible with software from X-Rite and other leading spectrophotometer manufacturers
- Automatically corrects for overpours
- Capacity to integrate with automated systems that gravimetrically dispense inks into stationary container

Item No. SPEC2000CWS

Interface Ability with Automated Dispensing Systems & Ink Formulation Systems.
